

Result

a. Model 1: Logistic Regression

Confusion matrix

Item counts

A confusion matrix shows how the model classified each label in the evaluation dataset. The blue, bold cells indicate a correct prediction. A data item is moved to the dropped column if it does not meet the confidence threshold for any label.

True label	Predicted label	
	1	0
1	100%	0%
0	100%	0%

b. Model 2: Boosted Tree Classifier
